

Deer Repellent

The #1 Rated, Most Effective Deer Repellent Available!

Bobbex Deer Repellent is a proven effective solution for protecting ornamental plantings, shrubs, and forest trees from browsing and feeding Deer, Moose, and Elk. Created as a fast- and easy-to-apply topical foliar spray, Bobbex Deer Repellent deters and prevents the costly damage associated with these destructive herbivores.

An Effective Deer Repellent Designed to Work Better!

Bobbex Deer Repellent is a blend of 100% natural and safe ingredients that include active proteins. Although only 3 ingredients are considered active by the EPA, additional inert ingredients including Meat Meal, Fish Meal, Fish Oil and others combine to create a multi-redundancy “smell and taste” aversion that significantly lowers deer predation. An independent test against 10 known competitors proclaimed Bobbex to be 93% effective—superior over all competitors and second only to a physical fence!

A Natural, Safe Deer Repellent that's Actually GOOD for Plants!

The organic ingredients in Bobbex Deer Repellent make it beneficial to plant development, and safe for use on even the most sensitive vegetation. Unlike pesticides or poisons, Bobbex is environmentally-friendly, harmless to humans, and safe for all wildlife including animals, pets, birds and aquatic creatures.

Fast & Easy-to-Apply—and Long Lasting!

Bobbex Deer Repellent is available as both a Ready-to-Dilute Concentrate and Ready-to-Use Spray. Application will not burn plants and can be done in almost any climate or temperature. After application, Bobbex dries clear, and due to an extremely effective sticking agent and fish oil, becomes water-insoluble, so it will endure through several heavy rains. When first applied there is a slight odor that becomes undetectable to humans within 24 hours—but continues to repel deer for weeks!
