

Colonnade® Bolero Apple

Malus 'Tuscan'

Description

An exciting new columnar type of tree that grows straight up with many narrow side branches. The fruit is borne on branches as well as the main leader. The incredibly unique form will allow those with the smallest of yards the chance to enjoy fresh fruit with just two square feet of space. Bright white blooms of spring lead to yellow-green fruit with an orange-red blush ripening mid to late August. Crisp and juicy with good flavor.
